Solution Brief

Sophos Endpoint
Prevent breaches, ransomware, and data loss

Sophos Endpoint provides unparalleled defense against advanced cyberattacks. Airtight ransomware protection and a comprehensive defense-in-depth approach stop the broadest range of threats before they impact your systems. Powerful EDR and XDR tools enable your team to detect, investigate, and respond to sophisticated multi-stage threats with speed and precision.

Use Cases

1 | PREVENTION-FIRST APPROACH

Desired Outcome: Block more threats upfront to minimize risk and reduce investigation and response workload.

Solution: Sophos takes a comprehensive approach to endpoint security, blocking threats without relying on any single technique. Web, application, and peripheral controls reduce the attack surface and block common attack vectors. Robust ransomware protection, AI, behavioral analysis, anti-exploitation, and other state-of-the-art technologies, stop attacks fast before they escalate.

2 | ADAPTIVE DEFENSES

Desired Outcome: Stop active adversaries with dynamic protection that automatically adapts as an attack evolves.

Solution: When Sophos Endpoint detects a hands-on-keyboard attack, it automatically activates additional defenses with a "shields up" approach to stop the adversary in their tracks. In this heightened mode of protection, suspicious activities such as remote admin tool downloads are blocked instantly, giving your team valuable extra time to respond.

3 | DETECTION AND RESPONSE

Desired Outcome: Neutralize sophisticated multi-stage attacks that can't be stopped by technology alone.

Solution: Powerful EDR and XDR tools enable you to detect, investigate, and respond to suspicious activity across Sophos and third-party security products. Organizations with limited in-house resources can engage the Sophos Managed Detection and Response (MDR) service or take advantage of the Sophos Incident Response Services Retainer for fast access to our elite team of experts in the event of a breach.

4 | STREAMLINED MANAGEMENT

Desired Outcome: Focus on threats instead of administration.

Solution: Sophos Central is a cloud-based platform that simplifies the management of all Sophos products and services in a single console. Strong default policy settings ensure your organization has the recommended protection enabled immediately with no additional training or tuning required. Sophos Central's account health check identifies configuration issues and provides simple click-to-fix remediation to strengthen your security posture.

Gartner.
A Leader in the Magic Quadrant for Endpoint Protection Platforms for 14 consecutive reports

IDC
A Leader in the 2024 IDC MarketScape for Worldwide Modern Endpoint Security for Small and Midsize Businesses

SE Labs
Industry leading results in independent third-party protection testing

#1
The most robust zero-touch endpoint defense against remote ransomware
